LinkedIn | tryhackme | github | wafeeqsyed303@gmail.com | +91 7396157073

Profile Summary

Cybersecurity undergraduate with hands-on experience in SOC operations, SIEM monitoring, IDS/IPS configuration and enterprise networking through self-built lab environments. Developed practical skills in alert triage, log analysis, and threat detection using tools including Splunk, Wazuh, Snort, Suricata, and Syslog. Familiar with network protocols, infrastructure design and connectivity validation. Seeking an opportunity where I can apply and grow these skills in areal-world.

Education

Bachelor of Technology- Vignan University- Vadlamudi

- Computer Science and Engineering(Cyber-Security)

CGPA - 8.44

July 2023 – Present

Intermediate- ARKA Junior College

- MPC

Percentage - 95

Aug 2021 - March 2023

Projects

SOC -Security Operation Center | *Research and Development*

2026/ Jan - May

- Implemented SOC operations for alert triaging, log analysis and network monitoring.
- Designed network topology for log collection and communication between network devices and end nodes.
- Configured and utilized Wazuh for monitoring alerts from network devices and endpoints.
- Integrated TheHive for incident tracking and case management.
- Investigated and managed 25+ security cases involving suspicious activities, unauthorized access attempts.

Secure DNS Resolver | *Python, DNS, logging.*

2026/ Mar - Apr

- Built a multi-signal DNS engine that queries Google DoH and Cloudflare DoH in parallel.
- Cross-validating responses via exact IP overlap and ASN correlation to detect DNS spoofing and cache poisoning.
- Implemented DNS sinkholing to redirect malicious response to a controlled address, flagging redirection attacks.
- Designed a structured JSON logging pipeline capturing DNS telemetry, ingested into Splunk for real-time threat monitoring and anomaly detection.
- Applied TTL based caching to reduce upstream query volume and improve resolver response latency.

DECEPTA – Phishing Detection Platform | *Python, NLP, SQLite, HTML, CSS*

2025/ Nov - Dec

- Developed a phishing detection and analysis platform using flask backend and NLP based approach.
- Implemented email parsing and authentication validation via parameter verification including SPF, DKIM, DMARC.
- Integrated HuggingFace transformers for motive derivation and metric calculation.
- Added behavioral analysis and decision making via scoring mechanisms.
- Designed a modular architecture for future expansion and collaborations.

Company Business Network Design | *Packet Tracer*

(Ongoing)

- Designed and simulated a hierarchical enterprise network using Cisco Packet Tracer.
- Created a structured network layout connecting 5+ departments and multiple network devices.
- Configured network connectivity and verified communication between devices within the environment.
- Applied network design principles to model an realworld business network.
- Tested and validated network functionality through simulation.

Skills

- Programming languages :** Python, SQL, HTML, CSS.
- Cybersecurity:** Log analysis, Security Monitoring, Alert Triage, Incident Investigation, Case management, IDS/IPS,F/W.
- Networking:** TCP/IP, UDP, DNS, DHCP, SMTP, Subnetting, Network trouble shooting, Cisco Packet Tracer
- SIEM & Security Tools :** Wazuh SIEM, Splunk , TheHive(Case Management), Syslog, Snort, Suricata, Fail2Ban, Nmap, Wireshark, Metasploit
- Operating Systems:** Ubuntu Linux, Kali Linux, Windows
- Developer Tools:** Git, GitHub, Docker, VS-Code

Achievements

- Cisco NetAcad - CCNA: Introduction to Networks · Switching, Routing & Wireless Essentials · Enterprise Networking, Security & Automation.**
- Cisco NetAcad - Introduction to Modern AI · Python Essentials 1 & 2 · Introduction to Data Science**
- Competency** - Runnerup in Agentic AI - Build hackathon (SRM-AP)
- TryHackMe** - Advent Of Cyber
- Leetcode** - 250+ problems solved.
